Sending ACCPAC business forms is a breeze

*eTransmit*TM

Faster selection of documents to be emailed or faxed without macro editing or knowledge of other programs.

Eliminates problems viewing email attachments accurately.

Ensures accuracy by delivering accounting information that is uneditable by the email recipient.

Better management of email and fax transmission failures and errors.

Better information regarding successful transmission by email or fax of ACCPAC business forms.

Better management of email addresses and fax numbers in one central location within your ACCPAC programs.

designed for

ACCPAC

Advantage SeriesTM

Overview

eTransmit provides a fast and easy way to send ACCPAC Advantage SeriesTM business forms from Accounts Receivable, Accounts Payable, Order Entry, Purchase Orders, and Payroll via email or fax. eTransmit is fully scalable enabling the user to send a small or large range of documents with ease.

Key Features

Emails and faxes many types of ACCPAC business forms

Email or fax ACCPAC[®] Order Entry Invoices, Credit Notes, Order Confirmations and Quotes; Accounts Payable Advices; Accounts Receivable Statements, Invoices, Credit Notes and Debit Notes; Purchase Orders; Canadian and US Payroll Advices.

Installs and runs within ACCPAC System Manager

eTransmit maintains the same user interface as your other ACCPAC programs making your learning curve less costly than running programs using different interfaces.

Sends documents in Adobe Acrobat PDF format

By emailing business forms in PDF format, the recipient needs only Adobe Acrobat Reader to view the document in the format intended by the sender. Adobe Acrobat Reader can be downloaded for free simply by clicking on the Adobe link included inside every email message from eTransmit. Also, PDF files cannot be edited by the recipient and are therefore more trustworthy for accounting purposes.

Uses the same forms and codes you use in Order Entry and Accounts Receivable

eTransmit can use the same forms and codes that are available with your ACCPAC Advantage Series Order Entry, Purchase Orders and Accounts Receivable programs. There is no need to redesign Invoices, Credit Notes, Order Confirmations, Quotes, Purchase Orders and Customer Statements for use with our program.

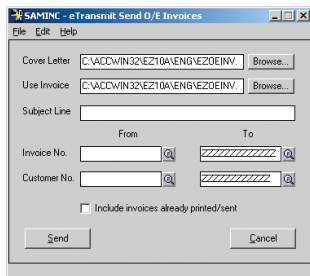

Manages forms sent by eTransmit separately

If you want to maintain formats different from your Order Entry, Purchase Orders or Accounts Receivable for use with eTransmit, you can maintain a separate copy of each form in your eTransmit forms directory. You can also use customization directories if you are using the Enterprise edition of Advantage Series.

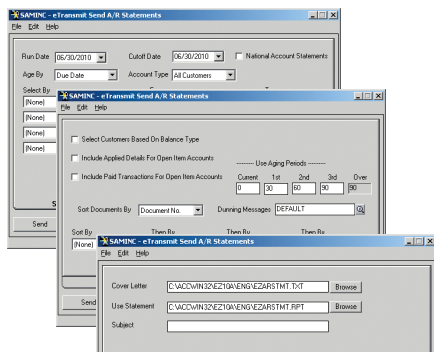

Automatically includes personalized cover letters with your transmissions

Design a TXT file to be sent as the email text of each emailed document or as a cover page for each fax transmission. Cover letters can be personalized using merge codes from your ACCPAC data and include a link for the email recipient to easily download Acrobat Reader, if required.

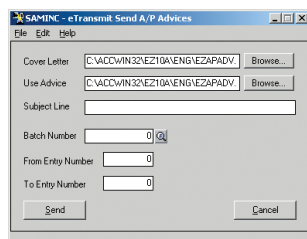

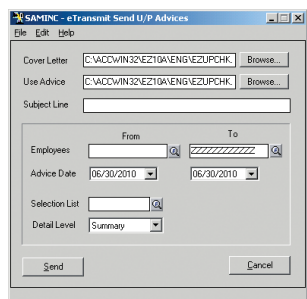

eTransmit enables you to easily select a range of customers and invoice numbers from Accounts Receivable or Order Entry for transmission by email or fax.

eTransmit enables you to easily fax or email your Accounts Receivable Customer Statements specifying the same selection criteria you pick when you print your statements inside Accounts Receivable.

Fax or email Accounts Payable check advices based on batch information and eTransmit options stored for each vendor.

Send Canadian or US Payroll check advices to employees based on previously processed check runs. Email and fax information stored in special eTransmit employee options file.

For more information, consult your ACCPAC authorized reseller or visit us at www.zcg.com.

Notification of transmission success

After you send documents via eTransmit, you will receive verification that the emails or faxes were sent successfully and warnings when transmissions have failed. A separate Transmission Log can be printed in detail or summary form listing the transmission results as required.

Easy restart of interrupted transmissions

If a system failure or invalid record causes eTransmit to stop during the sending process, an ACCPAC restart record is generated. This enables you to resume processing from the point of interruption after the reason for the interruption has been solved.

Supports SMTP and MAPI

Send emails using SMTP and MAPI mail protocols. Faxes can be sent using WinFax, Windows 2000/XP fax service, or a fax server that supports MAPI. Fax documents are sent in Adobe PDF format or RTF (Rich Text Format).

Integrates with ACCPAC Advantage Series products

eTransmit integrates with ACCPAC Advantage Series Accounts Receivable, Accounts Payable, Order Entry, Purchase Orders, Canadian and US Payroll. eTransmit is compatible with ACCPAC Advantage Series Discovery Edition, Small Business Edition, Corporate Series, or Enterprise Series.

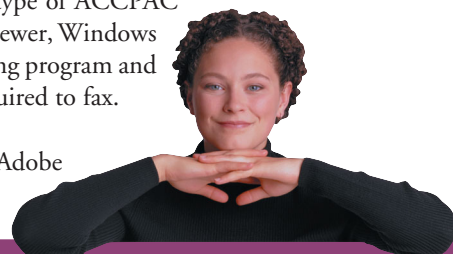

Developed in the ACCPAC SDK, eTransmit runs inside the ACCPAC System Manager like any other ACCPAC Advantage Series program. The look and feel of ACCPAC is used deliberately to encourage ease of use for ACCPAC end-users and consultants. If you know how to use your ACCPAC software, you will find that the familiar interface of eTransmit adds value to your ACCPAC system without adding a lot of new training requirements.

System Requirements

ACCPAC Advantage Series System Manager 4.2 with Service Pack 2 or higher. Optional modules include 4.2 or higher versions of Accounts Payable, Accounts Receivable, Order Entry, Purchase Orders, Canadian Payroll and/or US Payroll as is applicable to the type of ACCPAC forms you want eTransmit to send. WinFax 9.0 or newer, Windows 2000/XP Fax Service, or a MAPI Compatible Faxing program and Adobe Acrobat Reader or Microsoft Word are required to fax.

To view attachments, the email recipient must have Adobe Acrobat Reader which can be downloaded for free from www.adobe.com.
